About this Course

We have built this course for beginners who have no experience with the Linux system and the command-line interface.

In this course, you'll learn the basics of the command line interface of a Linux server: the terminal and shell (GNU Bash). This course includes an introduction to files and directories in the Linux filesystem.

What You Will Learn

LESSON 1

Get Into the Shell

- Learn about the terminal user interface.
- See how you can interact with a Linux server using shell commands.

LESSON 2

Shell Commands

- Different kinds of shell commands that work with the terminal in different ways
- Use the Linux manual (manpages) to expand your knowledge of shell commands.

LESSON 3

The Linux Filesystem

- Working with files and directories is a big part of using the shell.
- Learn basic commands for interacting with the filesystem.
